Portfolio website:

portfolio-git-main-kinginertias-projects.vercel.app

GitHub: <https://github.com/KingInertia>

Skills

.NET:

ASP.NET Core, Web API, CQRS (MediatR), REST, Entity Framework, Dapper, FluentValidation, NUnit, Moq.

Python:

FastAPI, REST, Django, DRF, Alembic, SQLAlchemy, Celery.

JavaScript / TypeScript

React, Redux, il8n, WebSocket.

HTML, CSS:

Tailwind CSS, MUI.

Databases:

PostgreSQL, Microsoft Sql Server, MongoDB, Redis.

Other:

Docker, Git.

Languages:

English - Intermediate

Ukrainian - Fluent

Russian - Advanced

Andriy Katroshenko

Full Stack Developer

Ukraine, Kyiv. 23 years old

Experience

July 2025 – Present

TOB "ΦAKT"

Full Stack Developer

Projects I'm working on:

Microfinance Platform (Credits)

Stack: .NET Core 2.2 → 3.1, Vue.js, Web API, Microsoft SQL Server, Azure, CQRS, MediatR, EF Core, Dapper, Hangfire, Swagger, SignalR.

Migrated legacy platform modules to up-to-date .NET versions and refactored business logic, rewriting "fat" controllers to implement the CQRS pattern (MediatR). Integrated and enhanced functionality for working with third-party API providers. Improved database interactions by rewriting legacy queries and developing new ones. Expanded background processing logic using Hangfire (automated mailings, application status checks).

Internal Software for Lawyers (LegalTech)

Stack: Python, FastAPI, REST API, React, PostgreSQL, MongoDB, Redis, Docker, GitHub/GitLab.

Migrated legacy .NET desktop applications to a modern web-based architecture using FastAPI for the backend and React for the frontend.

Automated interactions with the "Electronic Court" system, optimizing the performance of legacy software and introducing new, efficient tools.

Developed specialized internal tools to automate and simplify lawyers' daily interactions with the database.

Enhanced existing applications for handling legal documents and implemented new functionality for automated document generation.

Automated data collection from third-party web resources using web scraping techniques.

Project: Clothing Marketplaces Integration (E-commerce)

Stack: Python, API Integration, MS SQL Server, SQLAlchemy, Alembic, Cron.

Developed a bidirectional synchronization system between marketplaces and a centralized CRM.

Automated order retrieval from various marketplace APIs via scheduled tasks (Cron).

Implemented inventory synchronization between the warehouse and marketplaces using API requests.

Standardized data processing for various marketplace API architectures to ensure consistent integration with the CRM.

October 2024 – February 2025

Meduzzen

Full Stack Developer

Projects I'm working on:

Auction Management Software

Stack: Python, Django, DRF, React, PostgreSQL, Ruff.

Participated in the project's early stages, setting up the initial repository structure and developing database models and migrations for auction entities.

Created user interfaces using React for auction catalogs and bidding interfaces.

Assisted in implementing backend logic to handle auction states and basic bidding functionality.

(Internship Training) Project: Company Training Manager (LMS)

Stack: Docker, Azure, GitHub Actions, Django, DRF, Celery, React, PostgreSQL, Ruff.

Developed an educational proof-of-concept for a corporate training platform using Django, React, and Celery, focusing on professional backend standards and asynchronous tasks under senior mentorship.

February 2022 – May 2022

Lira Soft

Trainee .NET Developer

Stack: C#, .NET, WPF.

Developed a specialized desktop module using WPF for the automated design and calculation of two-flight staircases within a complex structural engineering application.

Education

State University of Technology and Infrastructure

Master of Science in Software Engineering September 2025 – Present

Bachelor of Science in Software Engineering September 2022 – June 2025

Courses: JavaRush, SQL for Beginners: From Scratch to Oracle Certification
